

The Carton Capsule System is a patent pending custom packaging solution that combines a die-cut corrugated carton with a thermoformed end cap. This carton and thermoformed component system is designed to maximize product protection and minimize component materials while allowing them to be easily separated for recycling.

- Compact design
- Uses less material than a full-sized end cap
- Separates easily for recycling
- Clean and unique out-of-the-box experience for the end user
- Provides superior protection from physical harm during storage and transportation
- Affordable end cap solution
